EXPERIENCE

Back End Developer

PT Teknologi Operator Prima

08/2025 - Present Tangerang Regency, Banten

A technology services company focused on developing and operating digital systems, including application development, system integration, and IT solutions to support business operations

- Developed Mobile Banking backend services using Golang, handling core business logic and high-performance APIs.
- Optimized MySQL queries (stored procedures, functions) and improved performance through indexing & query tuning.
- Integrated external systems via SFTP and managed transactional data using PostgreSQL with optimized indexing.
- Developed Gateway Service using Golang for integration with payment gateway, third-party APIs, and internal microservices.
- Implemented Redis for caching and RabbitMQ for asynchronous messaging to improve system performance and scalability.
- Maintained Digital Banking applications using Delphi for system stability and legacy support.
- Developed ERP modules using PHP (Slim Framework) with MongoDB.
- Performed API testing and UAT using Postman.

Full Stack Development Internship

Dinas Cipta Karya, Tata Ruang dan Pertanahan Provinsi DKI

06/2024 - 08/2024 Central Jakarta , Jakarta

- Implemented essential features like Asset Groups using Laravel Framework, enabling efficient asset categorization and management.
- Developed and integrated the AssetGroup Model with Laravel's Eloquent ORM for effective data storage and management.
- Adopted the MVC architecture in Laravel to enhance system modularity, maintainability, and performance.

Cloud Computing

Bangkit Academy led by Google, Tokopedia, Gojek, and Traveloka 2024

02/2024 - 07/2024 Remote

An industry-led digital talent program by Google, in collaboration with Tokopedia, Gojek, and Traveloka, focusing on project-based learning in Cloud Computing, Machine Learning, and Mobile Development to prepare participants for industry-ready roles

- Utilize Google Cloud Platform (GCP).
- I collaborated with a team to complete a capstone project using Next.js, Node.js, and Cloud SQL that involved designing and implementing a cloud-based solution
- Deployed the application on Google Cloud Run. leveraging Google Cloud Platform (GCP) for efficient scaling and performance.

EDUCATION

Bachelor of Informatics Engineering

Institut Teknologi Sumatera

08/2021-11/2025 Lampung Selatan

GPA 3.33 / 4.00

SeniorHighSchool, IPA

SMAN 8 BEKASI

07/2017 - 07/2021 Indonesia

GPA 87.50 / 100.00

PROFILE SUMMARY

Informatics Engineering graduate from Institut Teknologi Sumatera with hands-on experience in backend and full stack web development. Skilled in building scalable web applications, RESTful APIs, system integrations, and cloud-based deployments using Golang, Node.js, PHP, Python, Next.js, and React.js. Experienced in developing financial and enterprise systems with PostgreSQL, MySQL, Redis, RabbitMQ, and Google Cloud Platform GCP . Strong adaptability, problem-solving skills, and proven experience working in both collaborative teams and production environments

SKILLS

Programming Languages

Golang Node.js PHP Python JavaScript

Frameworks & Libraries

Next.js React.js Laravel Slim Framework FastAPI ShadCN UI Tailwind CSS

Databases

PostgreSQL MySQL MongoDB Redis

Cloud & DevOps

Google Cloud Platform GCP Vercel

Tools & Technologies

RabbitMQ SFTP Postman Delphi RESTful APIs

PROJECTS

Sinity Finance

2026

URL Sinity Finance

Sinity Finance, a personal finance management web application for tracking income, expenses, budgeting, savings, and account balances. Built using Next.js, Golang, ShadCN UI, and deployed on Vercel. The application includes a responsive modern dashboard and a mock/demo mode that allows users to explore the system without creating an account or using real financial data

Sinity Course

2025

Developed Sinity Course, a course recommendation platform that helps users discover personalized learning content using a Hybrid Recommendation System combining Content-Based Filtering and Collaborative Filtering methods. Built with Next.js, FastAPI, Tailwind CSS, and ShadCN UI, the platform features a responsive dashboard, user preference analysis, recommendation engine integration, and RESTful API architecture. The application was deployed using Google Cloud Platform (GCP) to support scalable backend services and cloud-based infrastructure deployment.

Rekomenin Projects

2024

Contributed to the development of Rekomenin, a recommendation system platform developed as part of the Bangkit Academy capstone project led by Google, GoTo, and Traveloka. Responsible for frontend development and deployment processes using Next.js and Google Cloud Platform (GCP). Developed responsive and interactive user interfaces, integrated frontend services with backend APIs, and managed cloud deployment to ensure scalability, performance, and accessibility of the application.

CERTIFICATES

- Dicoding Indonesia Certifications (2024): Become a Google Cloud Engineer
- Dicoding Indonesia Certifications (2024): JavaScript Programming Basics
- Google Cloud Skill Boost Certifications (2024): Develop your Google Cloud Network
- Google Cloud Skill Boost Certifications (2024): Build a Secure Google Cloud Network
- Dicoding Indonesia Certifications (2024): Create Back-End Applications for Beginners with Google Cloud
- Dicoding Indonesia Certifications (2024): Web Programming Basics
- Google Cloud Skill Boost Certifications (2024): Build Infrastructure with Terraform on Google Cloud
